

# **Sikkr: User manual**

Studies has shown that using your phone while driving highly increases the risk for an accident. With this in mind we created the application Sikkr.

Sikkr is an application that will make your communication with other people easier and more safe while driving.

Its main focus is to reduce the time you need to spend watching your phone due to communication.

This manual will show you how SiKKr is used.

## Start screen

From the start screen you will have different options of what to do.

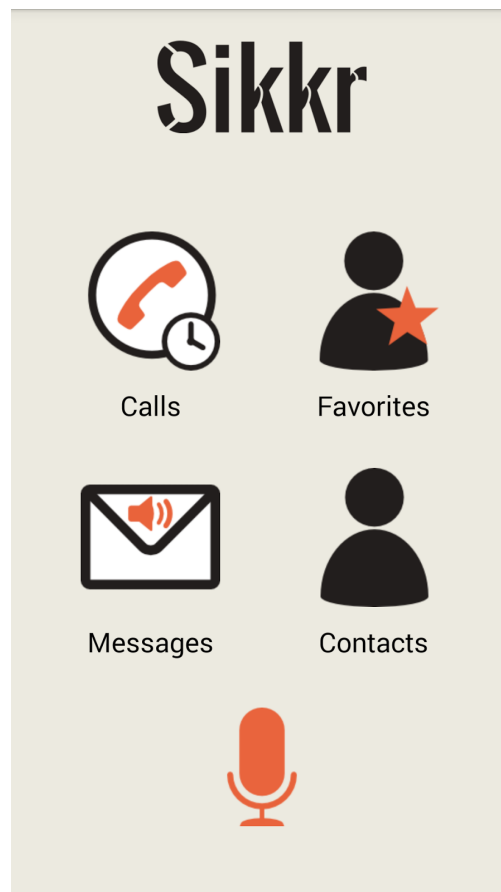

Buttons with characteristic icons will indicate the different functionalities.

There is a microphone icon below the four main buttons. Pressing this will activate voice control that may be used to access some of SiKKr's functionalities.

Using voice control (all of this is also explained in the other sections):

- Saying "Contacts", "Favorites", "Messages" or "Calls" let's you go directly into those categories.
- Saying "Call" and then a contacts first name or full name let's you directly call that contact. For example "Call Alex".
- Saying "Show" and then a contacts first name or full name let's you view that contact. For example "Show Tim".
- Saying "Contacts" and then a letter let's you directly search a letter in your contact book, showing every contact that begins on that letter. For example "Contacts A".

Remember to set the right laungauge on your phone before using the voice control to avoid misreading the commands.

## Finding a contact

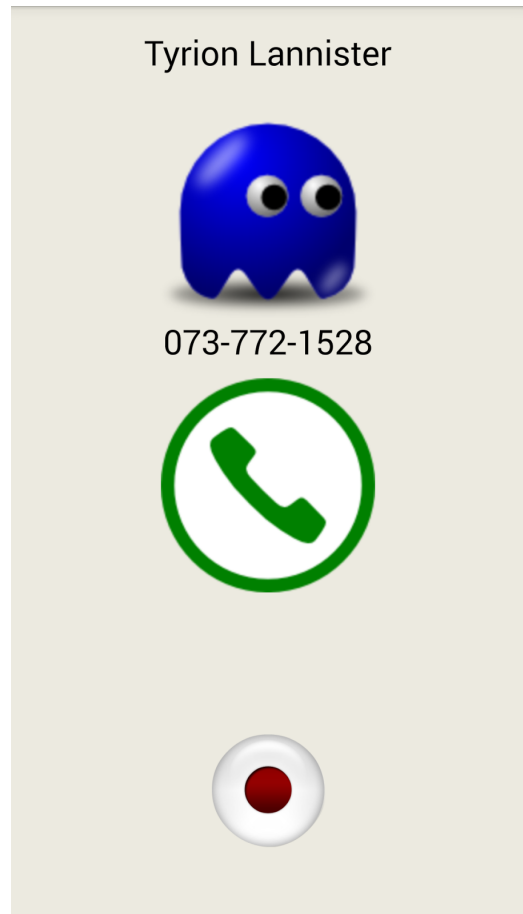

Finding a contact is an easy task in SiKKr.

There is two ways of doing this:

- Press the microphone and say “Show” (\*) followed by the contact name you wish to view.

(\*) “Show” must be said in the language that is configured in your phone’s “voice recognition” settings.

- Press the “Contacts” button, choose the first letter in the contact name you wish to view and from there, press the contact you seek.

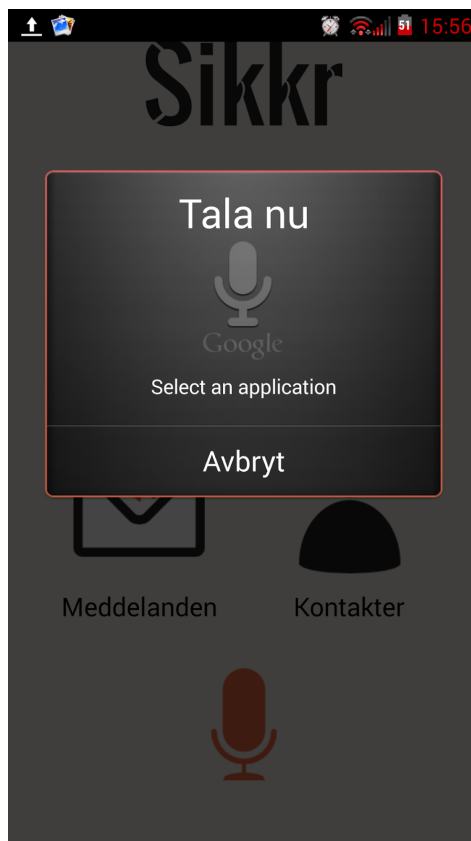

## Making a phone call.

Making a call is one of Sikkr's main functions and there are two main ways of doing this.

- Use voice control by pressing the microphone icon from the start screen and say "call..."(\*) followed by the contact name you wish to call.

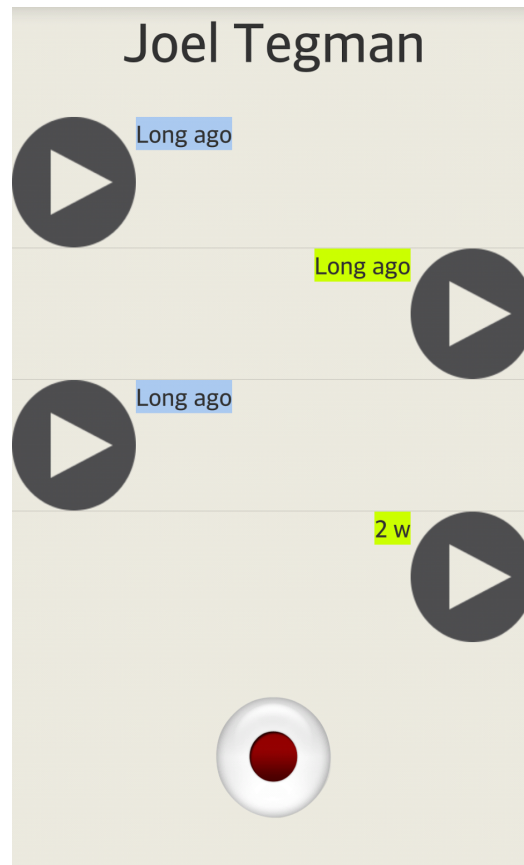

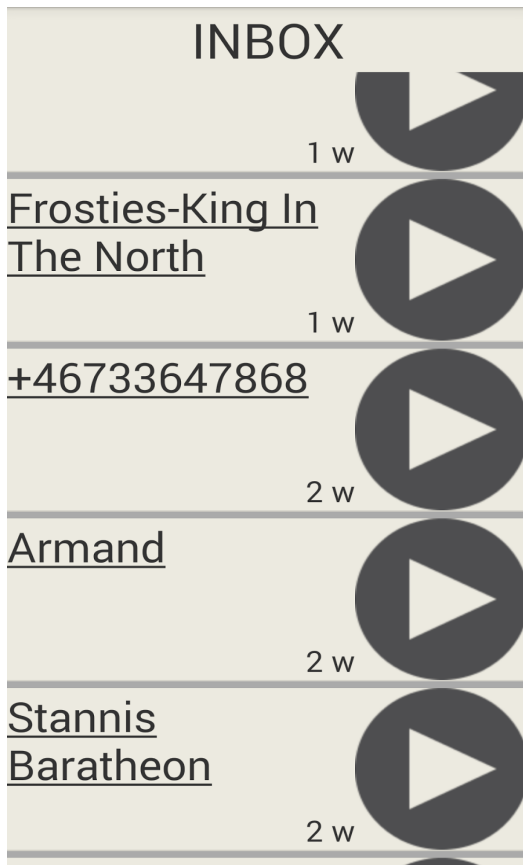

(\*) "call" must be said in the language that is configured in your phones "voice recognition" settings.

- Navigating to the contact through for example the Favorites category and press the call button.

## Having text messages read aloud

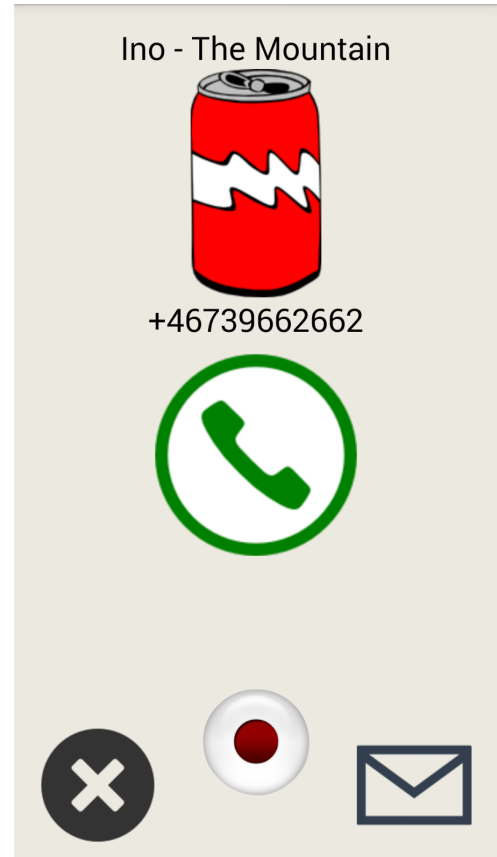

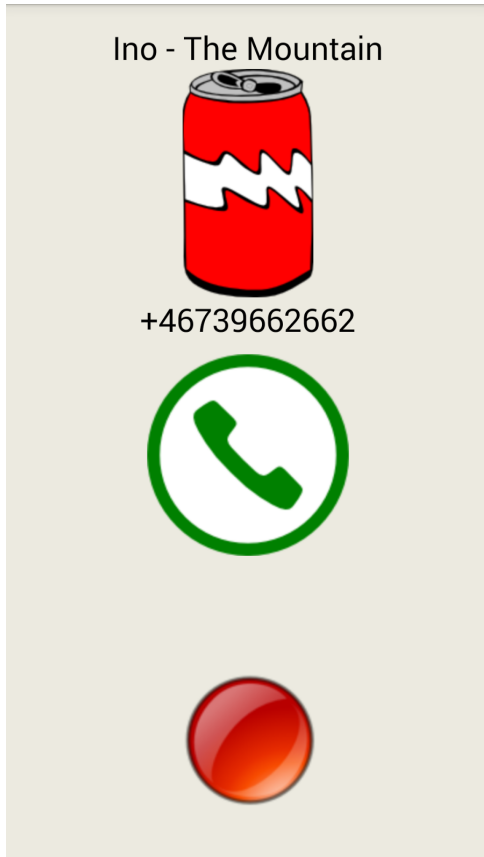

To read aloud a sms, press the “Message” button, find the contact who sent the message you wish to listen to. If you want to listen to the latest recieved message from this contact, just press the big play button. If you want to see the entire sms conversation, press the name or the number displayed next to the play button.

## Sending a voice message

There are two different modes for sending a voice message.

- While showing a contact you will see a white and red button on the bottom of the screen. Pressing it once will directly activate your microphone, letting you record your message. This will change the button to be big and red.
- When you are finished recording, press the big red button to get the alternatives to either trash or send the message.

- This record button is also available in the sms conversation view with a specific contact (see topic “Having text messages read aloud”).
